

# CHEPSTOW

Adaptavate is a world leader in developing and industrialising carbon negative construction materials.

## AT A GLANCE

### 1990s solid wall property

- **Location:** Chepstow, Monmouthshire
- **Project type:** Insulation and finishing
- **Property type:** Solid wall property
- **Product:** Breathaplasta Thermal, Universal and Smooth
- **Installer:** Prince Plastering Services

Once part of the renowned Curre Estate near Chepstow is now part of the Arts & Crafts Movement. It is built in Welsh granite with nearly two-foot-thick external walls but lacks additional heating.

The best solution was Internal Wall Insulation (IWI) with natural, breathable insulation materials for a sympathetic renovation in keeping with the age of the building. Our different Breathaplasta products were the perfect match.

Breathaplasta Thermal was applied at between 40 and 60mm thickness and instantly allowed a rapid uplift in thermal performance in just one day! In addition, wood fibre IWI boards at specific locations and wood wool boards on the ceilings, finished with 8mm Breathaplasta Universal and 3mm Breathaplasta Smooth, added a beautiful surface finish throughout.

"We're experienced gypsum plasterers. We've used Breathaplasta for over a year now, and found it to be the best product on the market! The thermal goes on quick and is fast setting."
