

BREATHAPLASTA

Breathaplasta is a biocomposite internal plaster to help fight against mould and condensation in our buildings. It has a thermal benefits as well as the ability to breathe with the people in buildings, creating healthier internal spaces. All these benefits and it is easy to install on any project!

Twice the thermal performance in comparison to regular plaster.

Easy to use - designed to have the same installation timings as conventional plasters.

A like-for-like material solution that is straight forward to **specify**.

Breathaplasta absorbs and desorbs the moisture created in our buildings. This can be up to **14 litres/day** in an average family home

1/3 volume

using crop by-products grown in UK- **sustainable** material.

Helps to create **healthier** homes due to a reduction in mould problems.
